

1. The Development of Molecular Biotechnology 1

2. Fundamental Technologies 13

Molecular Cloning 13

Genome Engineering Using CRISPR Technology 36

Polymerase Chain Reaction 39

Chemical Synthesis of Genes 46

DNA Sequencing Technologies 48

Sequencing Whole Genomes 56

Genomics 62

3. Production of Recombinant Proteins 91

Protein Production in Prokaryotic Hosts 91

Heterologous Protein Production in Eukaryotic Cells 119

Directed Mutagenesis 156

4. Molecular Diagnostics 179

Immunological Approaches To Detect Protein Biomarkers 180

DNA-Based Diagnostic Approaches 199

Detecting RNA Signatures of Disease 226

Biofluorescent and Bioluminescent Systems 233

5. Protein Therapeutics 243

Pharmaceuticals 244

Enzymes 253

Bacteria and Therapeutics 267

Recombinant Antibodies 280

Affibody Molecules 315

6. Nucleic Acids as Therapeutic Agents 325

Targeting Specific mRNA and DNA Sequences 327

Viral Delivery Systems 357

Nonviral Delivery Systems 365

Gene Therapy 376

7. Vaccines 387

Vaccination 387

Current and Future Vaccines 389

Subunit and Peptide Vaccines 392

Genetic Immunization: DNA Vaccines 414

Engineered Attenuated Vaccines 424

Vector Vaccines 430

Monoclonal Antibody Passive Immunity 449

8. Industrial and Environmental Uses of Recombinant Microorganisms 459

Restriction Endonucleases 459

Small Biological Molecules 461

Microbial Degradation of Xenobiotics 496

Utilization of Starch and Sugars 508

Utilization of Cellulose and Hemicellulose 518

Lipids from Cyanobacteria 534

Hydrogen Production 535

9. Large-Scale Production of Proteins and Nucleic Acids from Recombinant Microorganisms 545

Principles of Microbial Growth 547
Maximizing the Efficiency of the Fermentation Process 551
Bioreactors 561
Typical Large-Scale Fermentation Systems 565
Harvesting Microbial Cells 574
Disrupting Microbial Cells 576
Downstream Processing 57
Large-Scale Production of DNA and RNA 583

10. Genetic Engineering of Plants: Methodology 591

Plant Transformation with the Ti Plasmid of *A. tumefaciens* 595
Ti Plasmid-Derived Vector Systems 597
Microprojectile Bombardment 603
Chloroplast Engineering 604
Use of Reporter Genes in Transformed Plant Cells 610
Manipulation of Gene Expression in Plants 611
Production of Marker-Free Transgenic Plants 626

11. Transgenic Plants 637

Insect Resistance 637
Virus Resistance 658
Herbicide Resistance 668
Fungus and Bacterium Resistance 674
Salt and Drought Stress 682
Phytoremediation 686
Fruits and Flowers 688
Modification of Plant Nutritional Content 690
Modification of Food Plant Taste and Appearance 701
Plants as Bioreactors 706
Edible Vaccines 711
Plant Yield 716

12. Transgenic Animals 731

Transgenic Animal Methodologies 733
Transgenic Animal Models of Human Diseases 756
Animal Bioreactors for Production of Recombinant Therapeutic Proteins 767
Enhancing Production Traits of Food Animals 774
Gene Drives To Eradicate Vector-Transmitted Diseases 787

13. Molecular Biotechnology and Society 799

Development of Guidelines for Recombinant DNA Research 800
Deliberate Release of Genetically Modified Microorganisms 802
Regulation of Genetically Modified Foods 804
Societal Concerns about Genetically Modified Foods 812
Regulation and Safety of Medical Products of Biotechnology 827
Patenting Biotechnology 837

Summary 845
References 846
Review Questions 848

Amino Acids of Proteins and Their Designations 851
Index 853
